

## Amendments to the Claims

### Claims 1-16 (Canceled)

Claim 17 (Currently Amended) A mobile phone with a music reproduction function, said mobile phone comprising:

a reproduction unit operable to reproduce music data which is recorded in a recording medium;

an incoming call detection unit operable to detect an incoming call from outside;

a stop unit operable to instruct temporarily stop reproduction by said reproduction unit to stop reproduction of the music data when said incoming call detection unit detects an incoming call while said reproduction unit is reproducing the music data;

a resume method storage unit operable to store information indicating at least ~~one~~ two reproduction resume ~~method~~ methods; and

a control unit operable to select one of the at least ~~one~~ two reproduction resume ~~method~~ methods stored in said resume method storage unit, specify a reproduction start position of the music data based on the selected reproduction resume method, and instruct said reproduction unit to reproduce the music data from the specified reproduction start position, after reproduction is stopped by said reproduction unit in accordance with the instruction from said stop unit and a conversation finishes,

wherein the at least two reproduction resume methods includes at least one of a method to reproduce the music data from a beginning of the music data which was being reproduced just before being stopped, a method to reproduce the music data from a point at which the reproduction of the music data was stopped, and a method to jump back to the music data for a specified time from a point at which the reproduction of the music data was stopped and to restart the reproduction of the music data at the point.

### Claims 18-25 (Canceled)

Claim 26 (**Currently Amended**) The mobile phone according to Claim 17,

wherein said resume method storage unit includes a resume position information storage unit operable to store per the music data, resume position information indicating at least one break point of music, and

one of the at least ~~one~~ two reproduction resume ~~method~~ methods is a method to reproduce the music data from the at least one break point indicated by the resume position information just before a point at which the reproduction of the music data was stopped.

Claim 27 (**Currently Amended**) The mobile phone according to Claim 17, further comprising:

a reproduction resume method memory unit operable to memorize ~~the~~ a reproduction resume method designated by a user,

wherein ~~the~~ said control unit instructs the reproduction unit to reproduce the music data based on the designated reproduction resume method.

Claims 28-33 (**Canceled**)

Claim 34 (**Currently Amended**) A music data reproduction method ~~by~~ of a mobile phone with a music reproduction function for storing information indicating at least ~~one~~ two reproduction resume ~~method~~ methods in a memory in advance, said music data reproduction method comprising:

reproducing music data recorded in a recording medium;

detecting an incoming call from outside;

temporarily stopping reproduction of the reproduced music data when an incoming call is detected while the music data is being reproduced; and

selecting one of the at least ~~one~~ two reproduction resume ~~method~~ methods stored in the memory, specifying a reproduction start position of the music data based on the selected reproduction resume method, and resuming reproduction of music data from the specified reproduction start position, after reproduction is stopped and a conversation finishes,

wherein the at least two reproduction resume methods includes at least one of a method to reproduce the music data from a beginning of the music data which was being reproduced just before

being stopped, a method to reproduce the music data from a point at which the reproduction of the music data was stopped, and a method to jump back to the music data for a specified time from a point at which the reproduction of the music data was stopped and to restart the reproduction of the music data at the point.

Claims 35 and 36 (Canceled)

Claim 37 (Currently Amended) A program embodied on a computer readable medium for execution by a computer ~~for~~ of a mobile phone with a music reproduction function for storing information indicating at least ~~one~~ two reproduction resume ~~method~~ methods in a memory in advance, said program comprising:

computer readable program code operable to reproduce music data recorded in a recording medium;

computer readable program code operable to detect an incoming call from outside;

computer readable program code operable to ~~temporarily stop reproduction~~ instruct said computer readable program code operable to reproduce music data to stop reproduction of the reproduced music data when said computer readable program code operable to detect an incoming call detects an incoming call while said computer readable program code operable to reproduce music data is reproducing the music data; and

computer readable program code operable to select one of the at least ~~one~~ two reproduction resume ~~method~~ methods stored in the memory, specify a reproduction start position of the music data based on the selected reproduction resume method, and resume reproduction of the music data from the specified reproduction start position, after reproduction is stopped and a conversation finishes,

wherein the at least two reproduction resume methods includes at least one of a method to reproduce the music data from a beginning of the music data which was being reproduced just before being stopped, a method to reproduce the music data from a point at which the reproduction of the music data was stopped, and a method to jump back to the music data for a specified time from a point at which the reproduction of the music data was stopped and to restart the reproduction of the music data at the point.
